

Process Survey

See ../homework/shell-gymnastics/ps for the text dump files for part c of each question.

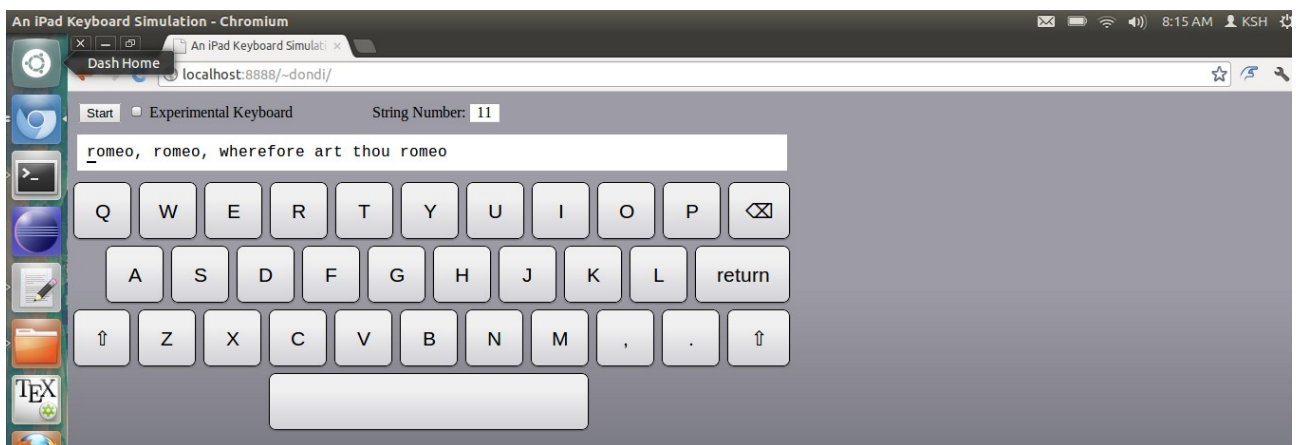

1. a.) The root-owned processes are those in the text dump except for the grep I ran to find it.
b.) `ps aux | grep root`
2. a.) The processes that are running on my account are those that can be seen in the text dump file. You can see bash, the chrome browser, and even a ssh client running.
b.) `ps aux | grep ksh`
3. a.) The program running with the most memory is this word processor that I'm using to write up my homework assignment, libreoffice writer. The program running with the most virtual memory is consolekit, which is a GUI which keeps track of logins.
b.) `ps aux --sort %mem`
`ps aux -sort vsz`
4. a.) Andy, Ashik, and Terran appear to also have ssh'd into the server.
b.) `ps aux | grep -v "khiga1" | grep -v "root"`

1.)

```
ssh khiga1@my.cs.lmu.edu  
ssh -L 8088:10.5.64.77:80
```

```
khiga1@ab201: ~  
- (Mac) How To SSH Remotely: Terminal  
  
Last login: Tue Feb  5 07:59:32 2013 from 10.22.177.204  
khiga1@ab201:~$ ssh -L 8888:80:10.5.64.77:80  
Privileged ports can only be forwarded by root.  
khiga1@ab201:~$ ssh -L 8888:10.5.64.77:80  
usage: ssh [-1246AaCfGkKMnqsTtVvXxYy] [-b bind_address] [-c cipher_spec]  
          [-D [bind_address:]port] [-e escape_char] [-F configfile]  
          [-I pkcs11] [-i identity_file]  
          [-L [bind_address:]port:host:hostport]  
          [-l login_name] [-m mac_spec] [-O ctl_cmd] [-o option] [-p port]  
          [-R [bind_address:]port:host:hostport] [-S ctl_path]  
          [-W host:port] [-w local_tun[:remote_tun]]  
          [user@]hostname [command]  
khiga1@ab201:~$ ssh -L 8088:10.5.64.77:80  
usage: ssh [-1246AaCfGkKMnqsTtVvXxYy] [-b bind_address] [-c cipher_spec]  
          [-D [bind_address:]port] [-e escape_char] [-F configfile]  
          [-I pkcs11] [-i identity_file]  
          [-L [bind_address:]port:host:hostport]  
          [-l login_name] [-m mac_spec] [-O ctl_cmd] [-o option] [-p port]  
          [-R [bind_address:]port:host:hostport] [-S ctl_path]  
          [-W host:port] [-w local_tun[:remote_tun]]  
          [user@]hostname [command]  
khiga1@ab201:~$
```

JD: (I would have edited your .odt file but it said that this was locked from editing)

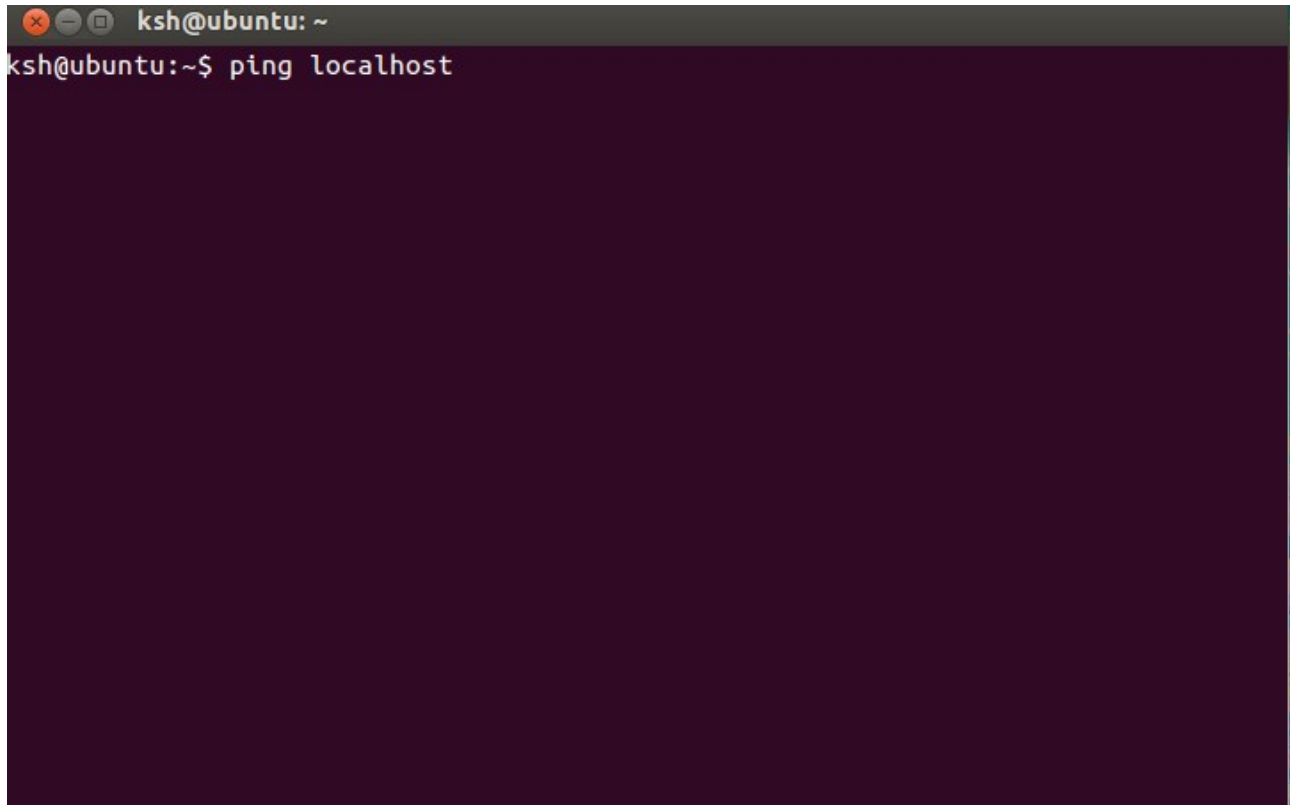

The results look OK, but actually I don't see how you got that to work. The tunneling commands that you show on the previous page are missing the target host (i.e., you should combine the my.cs.lmu.edu with the -L parameters). Based on your commands alone, the tunnel should never have worked.

My suspicion is that your access of localhost:8888 only *coincidentally* worked because someone else was working on this homework at the same time as you, and still had the tunnel open. Unfortunately it may have misled you into thinking that you had issued the right command.

You should give this a try again. Maybe change the port number to something else so that you can be sure that the tunnel, if it works, is truly the one that you set up and not someone else's.

2.)

```
screen  
ping localhost  
ctrl+A+D  
>logout  
>login  
screen -r
```

```
ksh@ubuntu: ~  
ksh@ubuntu:~$ ping localhost
```

```
ksh@ubuntu: ~  
ksh@ubuntu:~$ ping localhost

```

3.) `du -max-depth = 1 > du_home_dir.txt | sort -r -g > du_home_dir_sorted.txt`

The biggest appears to be the . configuration folder.

`du | grep Documents/CMSI`

Finds the disk space used within my computer science folders.

4.) a.) 5118227

b.) 5512206 JD: The change here is a little unexpected. Where exactly did you move the file for (b)?

c.) 5242944

d.) 5118227

`ls -li | grep 0205.txt`

5.) `mount | grep ^/dev/`

Output:

```
/dev/loop0 on / type ext3 (rw)
/dev/sda2 on /host type fuseblk
(rw,nosuid,nodev,relatime,user_id=0,group_id=0,allow_other,blksize=4096)
/dev/sdb1 on /media/34B5-C699 type vfat
(rw,nosuid,nodev,uid=1000,gid=1000,shortname=mixed,dmask=0077,utf8=1,showexec,flush,uhelper=udisks)
```
